

Lubro Units

W. Christie Lubro Units are the ideal choice for the control of torque in pneumatic torque tools.

Installed between the air compressor and the torque tool, a Lubro Unit will not only allow adjustment of the air pressure for control of tool torque, it also lubricates the air supply.

LUBRO UNITS

Carry Case Lubro

Carry case with integral Lubro Unit and storage for a Pneumatic Torque Tool and components.

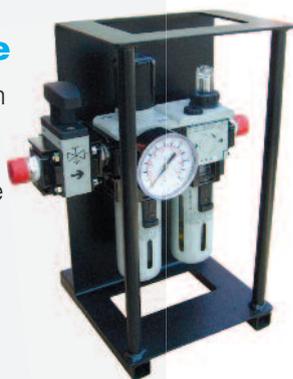

Heavy Duty Water Filter Lubro

The Heavy Duty Water Filter Lubro is suitable for conditions where air moisture is an issue. This Lubro Unit is highly effective at removing moisture from the air supply and therefore preventing corrosion and freezing of the tooling.

Examples from our range of Lubro Units available for different operating conditions.

Lubro with Isolator Valve

Lubro Unit fitted with an isolator valve to the inlet side of the Lubro for turning the air supply on or off.

Lubro with Key Lock

Lubro Unit fitted with a key lock on the regulator cap. This allows the pressure to be pre-set and locked at a given value.

Other variations and features are available for both Standard Lubro and Heavy Duty Water Filter Lubro versions

Stainless Steel Lubro Unit

Stainless Steel Lubro Unit suitable for ignition risk areas.

Caged Lubro

Lubro Unit with lockable cage to prevent tampering.

Multiple Pressure Pre-set Lubro Units

Multiple Pressure Lubro Units allow a number of pre-set pressures (torques).

Image shows 3 pre-set pressure model

Remote Lubro Unit

Remote Unit allows control of tooling from the Lubro.
